

Adam Kostka

AI Engineer | LLM Agents and Software Engineering

Warsaw, Poland | adamkostka002@gmail.com | feilaz.github.io | [LinkedIn](#) | [GitHub](#) | [Google Scholar](#)

SUMMARY

AI Engineer shipping customer-facing features and LLM-agent systems on an enterprise business-intelligence platform used by thousands of organizations, across Python, TypeScript, and cloud services. Author of eight published or accepted papers on multi-agent LLM systems, reasoning under uncertainty, and hallucination risk in agent pipelines.

EXPERIENCE

Strategy (NASDAQ: MSTR, formerly MicroStrategy)

Warsaw, Poland

AI Engineer

May 2025 – Present

- Owned delivery of a customer-facing Gantt-chart visualization now shipping in Strategy's business-intelligence platform: architecture, implementation, testing, cross-repository integration, and QA coordination.
- Built it in TypeScript, JavaScript, D3.js, and Node.js from an existing Figma design, then contributed to later refinements of both the design and the specification.
- Created a local test harness and AI-assisted development scaffolding that removed the need to rebuild and redeploy the full visualization library on every iteration.
- Delivered features on Strategy's agentic AI platform, including question-answer caching, dashboard recommendation workflows, and conversational follow-up handling, with backend and API changes across Python and OpenAPI services.
- Sole developer of a new internal enterprise learning platform, in active development: using a spec-driven process, consulting users and stakeholders on requirements, and reviewing the architecture with experienced engineers; building in Java, Spring Boot, React, and PostgreSQL.

Odra Labs

Warsaw, Poland / Remote

Co-founder and AI Engineer, independent venture

Oct 2025 – Aug 2026

- Co-founded a two-person AI product venture with a senior software engineer, contributing across architecture, implementation, and product delivery; secured AWS and Google startup credits.
- Built and deployed [HermesFix](#), an AWS-hosted platform repairing WooCommerce sites with LLM agents.
- Prototyped [Polis](#), an open-source environment for controlled execution and monitoring of autonomous agents, and [MergeLearn](#), a local-first tool where coding agents author lessons and FSRs schedules the review.

Bank Gospodarstwa Krajowego

Warsaw, Poland

Software Engineering Intern

Jul 2023 – Sep 2023

- Tested banking-platform APIs and workflows with SoapUI and Jira, reproducing and documenting defects.

TECHNICAL SKILLS

Core languages	Python, TypeScript, JavaScript, SQL
Additional languages	Java, C++
AI and agents	LLM agents, multi-agent systems, LangGraph, LangChain, RAG/GraphRAG, tool orchestration, agent evaluation
Application and data	FastAPI, Spring Boot, React, Node.js, REST/OpenAPI, PostgreSQL, Neo4j
Cloud and delivery	AWS, Git, CI/CD, software testing
Spoken languages	Polish (native), English (full professional proficiency)

RESEARCH AND AWARDS

- Peer-reviewed venues include **UAI 2026** (PMLR 337:3143–3161), ICLP 2026 (accepted), CogSci 2025, AIED 2025, PACLIC 38, and the journal *Knowledge*; 55 citations, h-index 4. Full list: [Google Scholar](#).
- Senate Scholarship**, Warsaw University of Technology (2026) – one of five recipients selected university-wide; Rector's Scholarship awarded three times.

EDUCATION

Warsaw University of Technology

Warsaw, Poland

MSc in Computer Science; weighted average: 4.75/5.00

Oct 2025 – Expected Jun 2027

BSc in Computer Science; weighted average: 4.56/5.00; diploma grade: Very Good

Oct 2022 – Jun 2025

Kyungpook National University

Daegu, South Korea

BSc in Computer Science and Engineering; double-degree program

Mar 2024 – Dec 2024
